❖ INDIA ALLUVIAL GARNET

20-40 MESH

20-40 Mesh

A large pile of dark brown, angular, 20-40 mesh granules. The granules are small, irregularly shaped particles with sharp edges, typical of a 20-40 mesh size. They are densely packed and cover most of the frame, with a white background visible at the top and left edges.

30-60 Mesh

A close-up photograph of a pile of reddish-brown, granular material, likely a mineral or soil sample. The material is composed of many small, irregular particles, giving it a fine, textured appearance. The pile is roughly circular and occupies most of the frame. The background is a plain, light color, possibly white, which makes the reddish-brown material stand out. The text "30-60 Mesh" is overlaid in the upper left quadrant of the image in a bold, white, sans-serif font.

50-80 Mesh

A close-up photograph of a large pile of dark brown, finely ground material, likely a powder or fine sand. The material has a uniform, granular texture and is piled in a conical shape. The text "50-80 Mesh" is overlaid in white, bold font in the upper left quadrant of the image.

Sieved Garnet Best for Waterjet

STAUROLITE

- *Good area coverage
- *High mil impression (2 mil finish)
- *No radiation issues
- *Low chloride and conductivity levels
- *Less dust generation
- *Faster blasting with lower abrasive consumption.
- *Suitable for blending with Slags and delivering high performance economically

STAUROLITE CONCENTRATE

A large, conical pile of dark brown, granular material, identified as staurolite concentrate. The material has a fine, uniform texture and is piled high, with the top edge visible. The background is white, which makes the dark brown color of the concentrate stand out.
